

Comments of Anastasia Pilipenko

4th year student of the Eurasian National University (Astana, Kazakhstan) on her study at the Russian State Hydrometeorological University

Fall semester, 2014-2015 academic year
Academic mobility program

Educational activity

During my training at RSHU I attended a series of hydrological disciplines: "Dynamics of flow and channel processes", "Hydrological calculations (stream runoff)", "Water management and regulation of river flows", "Aerospace methods of the natural environment investigations", "Hydrological forecasts", "Hydrotechnics and Melioration", "Dangerous hydrological phenomena", "Economics of hydrometeorological providing production activity". At the end of the course "Hydrological calculations" I presented a course project.

As for me, the system of higher education in RSHU differs from the ENU one: much more academic hours are allocated for lectures, available laboratory helps to obtain more of practical skills, and, of course, teaching staff is much more numerous: for example, there is a separate faculty which includes four different departments for the specialty of "Hydrology".

Leisure time

Memories and impressions about St.Petersburg, about 5 months carried out there are the most bright and warm. During my time spent there, the city full of life and breath of history has become for me a really close.

Its special atmosphere, style and deliberation, which are peculiar to this city, give some serenity and spiritual harmony, due to all these here you may feel yourself very comfortable and cozy.

Ah, that wonderful Neva's view which makes the heart soared and fills lungs with the breath of indescribable happiness! All this esthetic beauty of the city pleases your entire being, and at the same time it is carrying you away into the depths of the past.

St.Petersburg presented me a lot of great, sometimes difficult, but unforgettable moments. They are fascinating hiking tours and informative excursions, travel and acquaintances, fanny parties, and, of course, studies, which took the central point in my life during these 5 months.

I'm happy because I had the opportunity to study at a great university, which many famous hydrologists had graduated during 85 years from its establishment. Of course, these 5 months in St. Petersburg I will never forget!

For all this I am grateful to my parents, lecturers and staff of RSHU and ENU.

Prof. Doganovski A.M., Dean of the Hydrological Faculty and Anastasia Pilipenko

Ass.Prof. Shanochkin S.V., Deputy Dean of the Hydrological Faculty and Anastasia Pilipenko

Fabulous St. Petersburg
